- Historical data may not be a reliable indication for the future.
- The risk category shown is not guaranteed and may shift over time.
- The lowest category does not mean 'risk free'.

The risk indicator was calculated incorporating simulated historical data and may not be a reliable indication of the future risk profile of the Fund.

The rating is based upon changes in the prices of debt instruments held by the Fund. The value of debt instruments fluctuate depending on prevailing interest rates, credit ratings and market conditions.

High yield securities are deemed to be more at risk of the issuer or guarantor of a fixed income security failing to meet its payment obligations.

Performance volatility can be increased or reduced due to fluctuations in the currencies represented within this document.

The following risks are material in addition to the risks captured by the indicator above:

Credit Risk – A borrower or a counterparty may fail to repay or otherwise fail to meet contractual obligations to the Fund.

Liquidity Risk – Lack of a ready market or resale restrictions may limit the Fund's ability to sell a security. Where the Fund invests in illiquid securities or does not trade in large volumes,

the bid offer spreads may widen. Illiquid securities may trade at a discount and may affect the ability to meet redemptions on a timely basis.

Investment Risk - The Fund may not achieve its investment objective. An investment in the Fund involves investment risks including possible loss of the amount invested.

Issuer Risk – The issuer of a bond held within the Fund may not be able to meet its obligations to the Fund.

Counterparty Risk - In case of bankruptcy of the broker, there is no guarantee collateral held by the broker will be returned to the Fund. In the event of bankruptcy of the counterparty, the premium and any unrealised gains may be lost.

Derivative Risk - Derivatives may result in gains or losses that are greater than the original amount invested.

Valuation Risk - A position in the Fund may be valued incorrectly, as some prices may be uncertain at a point in time.

Currency Risk - Where a class of shares are in a currency other than the base currency of the Fund, the non-base share classes of the Fund may be affected unfavourably by fluctuations in currency rates.

The Fund may invest in sub-investment grade debt securities which carry a greater possibility that the issuer may be unable or unwilling to make timely payments of interest and principal and thus default. If this happens, or is perceived as likely to happen, the values of those debt securities will usually be more volatile. A default or expected default could also make it difficult for the Fund to sell the sub-investment grade securities at prices approximating the values that the Fund had previously placed on them.

For more information about risks, please see the section entitled "Risk Factors" of the Fund's prospectus and supplement, which are available at www.northerntrust.com/pooledfunds.
